For the two widget boxes I circled, change background color to #F3DAFF and border color to #C868F4

The background color and border colors of these two widget boxes shouldn't be red in my opinion. Red has the psychological effect of being associated with negativity, so the user may assume that there is some kind of error. I suggest a cooler color for both the background and the border of these two boxes, and I think purple would be a good fit here as it also fits with the green and blue of the other widget boxes. I recommend changing the background color from to #F3DAFF and the border color to #C868F4. The accompanying text which says "results" and "date" would also need to be changed to a dark purple if you go through with this change. Please refer to the following slide for more on this.

The text I have above does not have enough contrast with the background color and most of the text does not meet WCAG accessibility standards. I think the topmost text in gray could be **#5D5D64**, as this meets minimum WCAG requirements. The bottommost text which says things like "Results" or "Mbps" and the accompanying icons can be black or a darker shade of the color that is in the background. If you go with purple for the two widget boxes on the left, I recommend changing the colored text and icon to **#61098D** as this contrasts nicely with the background color of **#F3DAFF** and meets WCAG standards. If you want to stick with red, I recommend changing the colored text and icon to **#B61E1E**. For the green widget boxes, I recommend changing the colored text and icon to **#0E7D37**. The blue text and icon in the blue widget boxes do not need to be changed as there is enough contrast.

I think the text I have circled should be changed to #5D5D64 because it matches the gray text in the widgets at the top and it creates more contrast against the white background. I also think the text is too small and should be increased to at least 14px.

CalSPEED

Text sizes for upload, download, ping, and jitter result values need to be increased to be more readable, so I suggest making the text size 14px at the least. I think the box background and text colors for upload should match the colors established in the other widgets, so **#F0FDF4** for the box background of the upload result values and **#0E7D37** for the text color. The box background color and text color for download results values does not have to change. As far as the result value text for ping and jitter, this text should be just black with a white or light gray background, as there isn't any established colors for these values in the other widgets.
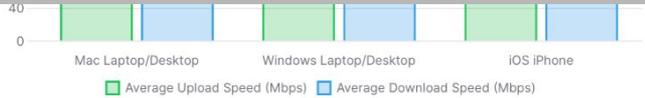

Change font size to 14px. Text color to black and box background to white or light gray.

Change font size to 14px.

Change font size to 14px. Bpx background color to **#F0FDF4**, text color to **#0E7D37**

I think the logo should be aligned to the center of the side navigation bar. This is not a change that absolutely needs to happen I just think it would look better centered.

This is how the history tab might look with most of the changes that I've suggested.

Here is what I use to check color contrast:
https://color.adobe.com/create/color-contrast-analyzer

For minimum contrast guidelines:
https://www.w3.org/TR/WCAG22/#dfn-large-scale
